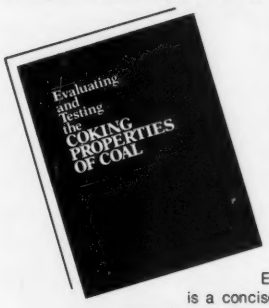
An important manual by WORLD COAL's preparation editor . . .



Evaluating and Testing the COKING PROPERTIES OF COAL

By RAYMOND E. ZIMMERMAN

EVALUATING AND TESTING THE COKING PROPERTIES OF COAL is a concise manual describing various methods for evaluating the coking properties of coals and discussing the important tests used in making this evaluation.

This book brings together in one convenient source the kind of information that is required to keep pace with today's coking coal markets. Comparing and analyzing all the international standards and testing methods, it provides a ready reference for importers and exporters. The kind of information coal producers and coal industry interests need to participate in a rapidly changing world market.

Author Raymond E. Zimmerman retired in September, 1979 as a vice president of The Paul Weir Company, worldwide consulting specialists. He is an acknowledged authority on the subject of coking coals, as well as in the field of coal preparation. The knowledge and experience gained by Mr. Zimmerman and The Paul Weir Company in their many years of consulting work in these fields has been drawn together and distilled in this manual.

RETURN THIS COUPON TODAY!

WC 11-12/82

WORLD COAL Book Department
500 Howard Street
San Francisco, California 94105 USA

Please send ___ copies of EVALUATING AND TESTING THE COKING PROPERTIES OF COAL by Raymond E. Zimmerman for my 15-day examination without obligation. I understand that at the end of that time, if I decide not to keep the book, I may return it for a full, prompt refund of my payment.

Check one:

☐ Payment enclosed at US$75 per copy. Publisher will pay surface postage & shipping expense.

☐ Send pro-forma invoice at US$75 per copy (plus postage & shipping) and send book(s) upon receipt of payment.

☐ Check here if you wish airmail shipment at additional cost.

Name

Title/Position

Company Name

Address

City State/Province Zip

Country

Contents

1 The characteristics of coking coals

2 The classification of coals
- American (ASTM) classification of coals by rank
- International classification of coals
- Comparison of ASTM and ISO classifications

3 Chemical analyses for coking coals
- Proximate analysis
- Proximate analysis evaluation for coking coal
- Ultimate analysis
- Mineral analysis of ash
- Fusion analysis of ash

4 Physical tests to determine coking coal characteristics
- Size analyses
- Hardgrove grindability index
- Coal washability characteristics
- Preferential crushing
- Plasticity tests
  - Free-Swelling Index (FSI)
  - Gieseler plastometer
  - Audibert-Arnu dilatometer
- Gray-King test
- Roga test (ISO)
- Shatter test (ASTM)
- Tumbler test (ASTM)
  - Micum tumbler test
  - Japanese tumbler test
- Sole-heated oven for expansion-contraction tests
- Adjustable-width, movable-wall coke oven

5 Petrographic analyses to determine coking properties
- Petrographic analysis by the oil reflectance method
- Interpretation of petrographic analysis

6 Contract evaluations

References

Appendices
- A Hard coal—Audibert-Arnu dilatometer test
- B Ruhr dilatometer
- C Coal—determination of caking power—Gray-King coke test
- D Hard coal—determination of caking power—Roga test
- E Second draft proposal for the Micum test by ISO Technical Committee 27. Solid Mineral Fuels
  Supplement: Chairman's report on the work of ISO Technical Committee 27
- F Japanese Industrial Standard drum and tumbler test
- G Sole-heated oven dilatometer for measuring the expansion and contraction behavior (volume change) of coals
- H Adjustable-width oven illustrations
